

Openserve Copper Connect

Accessible, Affordable, Stable,
Optimised and Relevant.

Every partner needs a connection

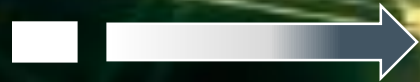

To work, play, game or stream, Copper Connect from Openserve is the most relevant, affordable and available connection for your customer outside the fibre footprint.

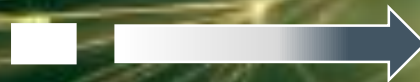

Committed to our connections

Our business is all about building your business - no long-term contracts, easy month to month arrangements, and rolling out fibre to the curb (MSAN) to improve copper performance. With the deployment of the latest, best-in-class tools that monitor and analyse the performance of the copper network, Openserve is able to optimise performance and customer experience on every single connection. Openserve actively monitors market trends, and our product range is subject to speed and other changes in accordance with these trends.

A connection for every purpose

5 Mbps

10 Mbps

20 Mbps

40 Mbps

Connect your customers to the most relevant, affordable and available connection on Copper Connect.
