

# Openserve Pure Connect

---

Accessible, Affordable, Stable,  
Optimised and Relevant.

# Every partner needs a connection

Pure Connect is delivered via Openserve's existing copper infrastructure where it is technically feasible and will be largely powered by our MSAN and ISAM networks that feature high-speed fibre backhaul and typically, shorter high-quality copper loops to end user premises.

This product offers an alternative fixed broadband connectivity option where Openserve has not yet rolled out fibre infrastructure, ensuring high speed connectivity to as many people as possible creating a truly connected digital nation

# No more voice-line pre-requisite

The Openserve Pure Connect product removes the necessity of having a separate voice line before being able to order your broadband service.

Customers who are still looking for a home or business telephone number can still order an Openserve Copper Connect product or purchase a Voice over Internet Protocol (VoIP) value added service from ISP's.

# Committed to our connections

Our business is all about building your business - no long-term contracts, easy month to month arrangements, and rolling out fibre to the curb (MSAN) to improve copper performance.

With the deployment of the latest, best-in-class tools that monitor and analyse the performance of the copper network, Openserve is able to optimise performance and customer experience on every single connection.

Openserve actively monitors market trends, and our product range is subject to speed and other changes in accordance with these trends.

# A connection for every purpose

-  Lite
-  10 Mbps
-  20 Mbps
-  50 Mbps

Connect your customers to the most relevant, affordable and available connection on Pure Connect from Openserve. For more information visit [www.openserve.co.za](http://www.openserve.co.za) or contact your dedicated Sales Manager. Terms and Conditions apply.
